

# Perennial Dividends 2019

We are excited

## Clematis climbing vine

Beautiful climbing vines filled with flowers that bloom summer into fall. Our selections are all large-flowered varieties of different colors.

They need at least 6 hours of sun per day, in a place with good air flow around them (not crowded among other tall plants). They also like cool roots, so mulch or a ground cover around their base is important. You might want to amend the planting hole, as they like

rich, well-drained soil. Also plan on some sort of support (trellis, fence, or pole).

## Oriental Lily bulbs

These lilies are known for dramatic large flowers and strong fragrance. They bloom late summer. We ordered a "mix", so you won't know what you have until they bloom.

They do best in full sun although they will tolerate a little shade. They like enriched soil. Most importantly, they require a well-drained area to avoid rotting bulbs. The shipped packaging recommended planting at 6 inches deep, and the website recommended spacing them out 8 to 10 inches from each other. They should multiply!

Full disclosure: The ordering website stated mature height at 4 feet, but I must tell you that the packaging on the bulbs when they arrived said "grows up to 8 feet." *You won't know what you have until they grow!*
